Descriptors - + Court Cases, + Delinquency, + Exceptional Child Services, Incidence, + Juvenile Courts, Rural Areas,

Sex Differences, State Programs, \*Statistical Data, Suburbs, Urban Areas

A summary of delinquency, traffic, and other cases, sources and limitations of data, and the definition of six terms precedes 14 tables of statistics. Tables cover the following cases disposed of in 1967 number of delinquency cases, manner of handling cases, rate of delinquency cases, percent change in delinquency cases, number and manner of handling traffic cases, and number and rate of dependency and neglect cases. Also covered are the number and rate of cases from 1940 to 1967, number and percent distribution by type of court from 1957 to 1967, number and percent distribution of cases by manner of handling from 1957 to 1967, number and percent distribution of cases by sex from 1957 to 1967, percent change in traffic cases from 1966 to 1967, and number and rate of dependency and neglect cases from 1966 to 1967, statistics are also provided for children's cases disposed of judicially and nonjudicially by all juvenile courts reporting for 1967 by state and by county or district. ## JUVENILE COURT STATISTICS - 1967

#### SUMMARY

### **Delinquency Cases**

EXTENT (Table 1) - About 811,000 juvenile delinquency cases (excluding traffic clenses) were handled by juvenile courts in the United States in 1967. The estimated number of children involved in these cases (699,000) was somewhat lower, however, since in some instances the same child was referred more than once during the year. These children represent 2.3 percent of all children aged 10 through 17 in the country. (Note: These data are not comparable to those reported for the years prior to 1957. Traffic offenses were not separately identifiable then, and were included with other delinquency cases. See section on "Traffic Cases" below.)

TREND (Tables 5, 6, 7, 8, and chart) - In 1967 there was again an increase in the number of juvenile court delinquency cases over the previous year. The increase for 1967 was 8.9 percent as compared to an increase in the child population aged 10 through 17 of only 2.2 percent. Thus, the upward trend in the number of delinquency cases, noted every year since 1949, with the exception of 1961, continues. And again, as in most previous years in the past decade, the increase in delinquency cases exceeded the increase in the child population. Between 1960 and 1967, the number of juvenile court cases increased by 57.8 percent as compared to a 21.7 percent increase in the number of children aged 10 through 17. The increase in delinquency cases in 1967 (8.9 percent) was higher than the increase of 6.9 percent noted in 1966.

While the overall national increase in 1967 was 8.9 percent, urpan courts experienced a 7.1 percent increase, semi-urban courts a 12.5 percent increase, and rural courts a 4.5 percent increase.

Nationally, there was a 7.9 percent increase in boys' cases and a 12.5 percent increase in girls' cases. Among the different types of courts, however, there was no consistent pattern: in urban and semi-urban courts, girls' cases increased more than boys', but in rural courts boys' cases increased while girls' cases declined.

Juvenile court delinquency statistics cited here mainly show how frequently the juvenile court is utilized in dealing with juvenile delinquency. But do juvenile court cases adequately reflect trends in the extent of juvenile delinquency? Would not police arrests of juveniles be a better indicator, since arrest data do not have some of the limitations of juvenile court data? We have found that both series of data--police arrests of juveniles reported by the Federal Bureau of Investigation, and juvenile court delinquency cases reported here -- show a remarkable similarity in their trends over a long period of time despite their differences in definitions, units of count, extent of coverage, etc. Both figures surged upward during World War II, fell off sharply in the immediate postwar years, and then began to climb again. Their trends have been steadily upward since 1949, with the exception of the slight decrease in court cases in 1961. In 1967 the increases were similar--8.9 percent in delinquency court cases and 10.5 percent in police arrests of juveniles.

In juvenile court delinquency data, each offense has an equal weight. Since juvenile delinquency cases cover a wide variety of offenses -- from relatively trivial to very serious -- and since the offenses are not weighted, might the upward trend merely reflect an increase in the occurrence of minor offenses? To examine this, one needs to rely upon the data on police arrests of juveniles reported by the Federal Bureau of Investigation which, unlike the juvenile court data, include information on the types of offenses committed. In the 1967 edition of the Uniform Crime Reports, the Federal Bureau of Investigation reported that arrests of juveniles under 18 years of age for all types of offenses increased by 68.5 percent between 1960 and 1967. For a group of serious offenses selected as being most reliably reported (criminal homicide, forcible rape, robbery, aggrevated assault, burglary, larceny, and auto theft), the combined increase between 1960 and 1967 was 59.2 percent. When offenses against the person (homicide, forcible rape, aggrevated assault, and robbery), generally accepted as being the most serious crimes, are selected from the reliably reported group, the increase between 1960 and 1967 is 99.3 percent. It cannot be assumed, therefore, that the upward trend in juvenile delinquency as determined from police arrest data is due primarily to an increase in minor offenses. All groups of offenses seem to be increasing, with the most serious ones showing substantially greater increases.

SEX RATIO (Table 1) - Delinquency remains primarily a boys' problem. Boys are referred to the javenile court almost four times as often as girls.

MANNER OF HANDLING (Table 2) - Somewhat more than half (54 percent) of the delinquency cases referred to juvenile courts in 1967 were handled nonjudicially

(i.e., without the filing of a petition). The proportion of cases handled non-judicially was higher in semi-urban and urban courts than in rural courts, owing perhaps to the availability of specialized intake or probation staff in the larger courts. (For a discussion on nonjudicial disposition of cases, see Standards for Juvenile and Family Courts, Children's Bureau Publication No. 437, 1966, pp. 57-60.)

RATES IN URBAN AND RURAL AREAS (Table 3) - The rate of delinquency cases (the number of cases per 1,000 child population aged 10 through 17) was 26.4 in 1967 as compared to 24.7 in 1966. Between 1960 and 1967 the rate increased from 20.1 to 26.4. In 1967 the rate of delinquency cases was almost three times higher in predominantly urban areas than in rural areas. Of all the juvenile court delinquency cases in the country, 65 percent were handled by courts in urban areas, 29 percent by courts in semi-urban areas, and 6 percent by courts in rural areas.

#### **Traffic Cases**

EXTENT (Table 9) - About 549,000 traffic cases were disposed of by juvenile courts in 1967 in addition to the 811,000 delinquency cases. These traffic cases involved 472,000 different children or 1.3 percent of the total child population aged 10 through 17. The number of traffic cases reported by the juvenile courts does not represent all juvenile traffic cases, but only those coming to the attention of juvenile courts.

CHANGE FROM PREVIOUS YEAR (Table 10) - Juvenile court traffic cases, like delinquency cases, showed an increase in 1967 over 1966. There were 5 percent more juvenile court traffic cases in 1967 than in 1966. Rural courts experienced the greatest increase in traffic cases between 1966 and 1967--17 percent.

#### Other Cases

DEPENDENCY AND NEGLECT (Tables 11, 12, 13) - Most juvenile courts have jurisdiction over court actions involving dependent and neglected children as well as delinquent children. Dependency and neglect cases in the United States totaled 154,000 in 1967, a decline of 5 percent from the 1966 figure. This is the first time in over a decade that the number of dependency and neglect cases has declined.

SPECIAL PROCEEDINGS - A small portion of cases involve adoption, custody, consent to marry, or other "special proceedings." Not all juvenile courts handle such cases.

## SOURCES AND LIMITATIONS OF DATA

Data on the number of juvenile delinquency cases are based on a national sample of juvenile courts which, drawn from the Current Population Survey sample of the Bureau of the Census, is intended to be representative of the country as a whole. For this sample, the United States was first divided into about 2,000 primary sampling units, each consisting of a county or a number of contiguous counties, such as those in a standard metropolitan statistical area. The 2,000 primary sampling units were then divided into 230 groups, each consisting of a set of sampling units as much alike as possible as to regional location, population density, percent of nonwhite population, rate of growth, etc. From each group a single primary sampling unit was selected at random, resulting in 230 sampling units in which 494 courts are located. (For a more detailed description of the Current Population Survey sample, see Current Population Reports, Series P-23, No. 2, Bureau of the Census.)

As shown below, the majority of urban courts serve large areas of 100,000 or more population; semi-urban courts serve medium-sized areas, and rural courts, small areas of under 20,000.

		Num	Number of courts serving populations of					
Type of courts	All	100,000	50,000 <b>-</b>	20,000 <b>-</b>	10,000 <b>-</b>	Under		
	courts	or over	99,999	49,999	19,999	10,000		
Total	494	187	73	122	59	53		
Urban	202	151	21	26	1	3		
	161	36	46	53	10	16		
	131		6	43	48	34		

In 1967, 441 courts or 89 percent of the sample courts reported. Of those courts not reporting, 9 were urban, 19 rural, and 25 semi-urban.

Data on dependency and neglect cases are based on 1,735 courts reporting on such cases to the Children's Bureau. These courts include in their jurisdiction approximately two-thirds of the child population under 18 years of age. The national

J

ERIC

sample was not used here, since data on these cases were not available for a sizeable number of courts in the sample.

The statistics in this publication represent the volume of children's cases disposed of by juvenile courts. These statistics are affected by several factors that must be considered in interpreting the data. The ages of children and the types of cases over which courts have jurisdiction are established by State law and often vary from State to State. These differences affect the number of cases reported and, consequently, the comparability of the reports. Also, the number of children's cases reported by courts is influenced by the organization and scope of other agencies in the community. Agencies in one community may adjust cases and send them to agencies other than the juvenile courts; in another community, the juvenile court may be one of the few agencies providing social services to children. Where social services for children are well established, the juvenile court may be one of the few agencies dealing with children and may be used mainly when no judicial authority is needed. Furthermore, whether or not a child ever comes to the attention of the court is often decided by varying community and parental attitudes toward a child's behavior.

Because of these and other limitations, juvenile court statistics, when taken by themselves, cannot measure the full extent of delinquency, dependency, and neglect, and they can be particularly misleading when used to compare one community with another. They do indicate, however, how frequently the juvenile court is utilized in dealing with such problems.

#### **DEFINITION OF TERMS**

- JUVENILE DELINQUENCY CASES are those referred for acts defined in the statutes of the State as the violation of a State law or municipal ordinance by children or youth of juvenile court age, or for conduct so seriously antisocial as to interfere with the rights of others or to menace the welfare of the delinquent himself, or of the community. This broad definition of delinquency includes conduct which violates the law only when committed by children, e.g., truancy, ungovernable behavior, and running away. Also included, but reported separately, are traffic violations whenever a juvenile court has jurisdiction in such cases.
- DEPENDENCY AND NEGLECT CASES cover neglect or inadequate care on the part of parents or guardians, e.g., lack of adequate care or support resulting from death, absence, or physical or mental incapacity of the parents, abandonment or desertion, abuse or cruel treatment, and improper or inadequate conditions in the home.
- SPECIAL PROCEEDINGS cover cases involving children in court for other than delinquency, dependency or neglect, e.g., adoption, institutional commitments for special purposes, application for consent to marry or to enlist in the armed forces, determination of custody or guardianship of a child, and permission (to hospitals) for an operation on a child.
- THE "UNIT OF COUNT" is a case actually disposed of by a court. Such a case is counted each time a child is referred to court during the year on a new referral in delinquency, dependency, neglect, or in special proceedings. Referrals for alleged or adjudged delinquency cases are also included.
- TYPE OF COURT is determined by the precentage of the population it serves that live in urban areas (as classified by the Bureau of the Census): for "urban courts," 70 percent or more; for "semi-urban courts," 30-69 percent; for "rural courts," under 30 percent. Since 1960, data from the 1960 decennial census has been used to determine the type of court.
- METHOD OF HANDLING CASES is classified into judicial and nonjudicial, sometimes referred to as official and unofficial. "Judicial cases" are those where the court has acted on the basis of a perition or motion; "nonjudicial cases," consequently, are those cases which have been adjusted by the judge, referee, probation officer, or other officer of the court without the invocation of the court's jurisdiction through petition or motion.

# TREND IN JUVENILE COURT DELINQUENCY CASES AND CHILD POPULATION 10 - 17 YEARS OF AGE, 1940 - 1967 (semi-logarithmic scale)

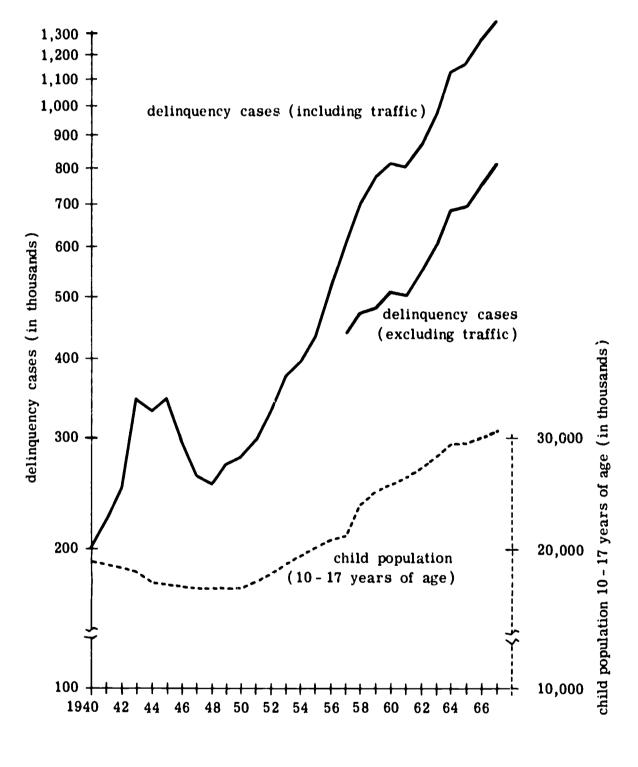

Table 1. --NUMBER OF DELINQUENCY CASES (EXCLUDING TRAFFIC) DISPOSED OF BY JUVENILE COURTS, UNITED STATES, 1967

	Total		Boys		Cirls	
Type of court	Number	Percent	Number	Percent	Number	Percent

1953	374,000		
1954	395,000		
1955	431,000		
1956	5 <b>2</b> 0,000		
1957	603,000	440,000	19.8
1958	b 703,000	473,000	20.1
1.959	b 773,000	483,000	19.6
1960	813,000	510,000	20.1
1961	801,000	503,000	19.3
1962	867,000	555,000	20.5
1963	967,000	601,000	21.4
1964	1,128,000	686,000	23.5
1965	1,157,000	697,000	23.6
1966	1,268,000	745,000	24.7
1967	1,360,300	811,000	26.4

a Data for 1955-1967 estimated from the national sample of juvenile courts. Data prior to 1955 estimated by the Children's Bureau, based on reports from a comparable group of courts. Inclusion of data for Alaska and Hawaii beginning in 1960 does not materially affect the trend.

b Much of the increase is accounted for in one State by administrative change in the method of handling juvenile traffic cases.

Table 6. --NUMBER AND PERCENT DISTRIBUTION OF DELINQUENCY CASES (EXCLUDING TRAFFIC) DISPOSED OF BY JUVENILE COURTS, BY TYPE OF COURT, UNITED STATES, 1957-1967

See footnotes on following page.

(\*) MIR WELL: This table is not limited to the sample group of courts but ther include all courts that transmitted reports to the (\*) MITS WELL: This table is not limited to the cample group of courts but the include all courts that transmitted reports to the Children's Chargest. The late in this table should not be used to cake comparisons between communities regarding the extent of delinquency. Questions conversing changes in an individual court's tata from one year to another should be livested to that individual court.

(\*) Courts corving areas with a pulation of the pulation of the care indicated and are presented as "small courts."

(\*) Where the age under which the court has original prediction to different for tops and girls, the age for tops appears first.

In California the jurisdiction of the ability court rather than the juvenile court is smally invoked for those 18 years of age or over.

In Latin is, the age jurisdiction in 18 for both tops and girls in dependency and neglect cases.

In New York inter the new family Court Act, the definition of "juvenile belinquency" to now limited to those offences of children under the new family court are which wentle constitute order of the child were ever in years of age. A new type of offence (relating to percents in meet

In New York inter the new Family Chart Act, the definition of "juventic lelinguency" to now limited to those offences of children under to year of age which would constitute crime if the child were over 16 years of age. A new type of offence (relating to percons in need of supervision) has been afted which covers cause of trainty, runaways, itembedies or inspringibility. These are included in our tables unter "delinquency" and he age limit for these as well as for neglect cases to be for toys and 1° for girls.

(1) Imapplicable— jevenile court does not have jurisitation over juvenile traffic cases.

(2) Data on traffic cases not reported or not reported caparately from other types of delinquency cases. In the latter case they are included unter "Delinquency — except traffic."

(1) Reported on official cases only.

(2) No report on dependency and neglect cases and/or special proceedings. For Shelty County, Tennessee, special proceedings are included with terendency and neglect official cases.

with dependency and neglect official cases.
